Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Laubner et al. (U.S. 2002/0149520 A1) .

Regarding claim 1, Laubner et al. teaches in figures 2A-2B a patch antenna apparatus comprising: a patch electrode [12] is provided on a top surface of a dielectric substrate [11] disposed above a first ground-plane portion [24] and is connected to current-feed means [14]; wherein the first ground-plane portion is arranged above a second ground-plane portion [10], which has a larger area than the first ground-plane portion (See FIG. 2B), with a predetermined distance therebetween [22]; and the first ground-plane portion is set so as to be excited by the second ground-plane portion at a frequency substantially equal to a frequency at which the patch electrode is excited when current is fed.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Laubner et al. (Cited above) in view of Soutiguine et al. (U.S. Patent No. 6,836,247).

Laubner et al. teaches every features of the claimed invention in paragraph 2, except for a low-noise amplifier circuit.

Soutiguine et al. teaches in figures 1-2 a low-noise amplifier circuit [16].

In view of the above statement, It would have been obvious to one having ordinary skill in the art at the time the invention was made to use a low-noise amplifier circuit as taught by Soutiguine et al. in order to amplify a signal from the receiving antenna element (See col. 7, lines 25-32).
